Smith's Color Shield is a revolutionary system for adding color, stain protection and water repellency to newly placed cured concrete or rejuvenating pavers or old integral color and/or plain exterior concrete. Color Shield utilizes U.V. stable pigments in conjunction with a hybrid penetrating and self cross-linking urethane carrier.

Whether a monotone color or color variation is the desired appearance, Smith's Color Shield allows the applicator to decide. This system does not require a film forming sealer, thus drastically reduces slip and fall issues associated with sealed concrete.

Smith's Color Shield systems is created by mixing 1 part Smith's Color Floor with 8 parts Smith's Nature Shield.

Not only is the Color Shield easy to initially install, but also the system's indefinite inter-coat adhesion makes long term re-application a breeze. Some notable installations include entrance to San Diego Zoo, Kaiser Permanente Downey Medical Center Campus, Universal Studios Hollywood splash pad and Kings Dominion waterpark.
